**Reasons For Allowance**

*None of the references disclose alone or in combination wherein the optical fiber is attachable about a fiber first attachment point and a fiber second attachment point to a housing having a hollow housing body for protecting the wavelength filter. The structure allows for both adjustment of the center wavelength and also for adjustment of the rate of wavelength drift per temperature change independently from the adjustment of the center wavelength. The center wavelength is independently adjusted by adjusting the tension imparted on the wavelength filter when the fiber is attached to the housing. Furthermore, the first and second component of the housing having coefficients of thermal expansion being selected so as to compensate for the thermal dependency of a grated section.*
